How to build value with Cloud Services

When moving to the cloud is not by default a success. Value requires revenue growth or cost reduction

Reality of enterprise IT environments

Mixed infrastructure environments, diverse app portfolios, & limited automation

The right
skills

Ingredients for survival

The new world demands all three

Speed

Innovate at
continuous **speed**.

Stability

Operate consistently
and with **stability**.

Scale

Be ready for today, and
build for the future with
scalability.

The new world demands all three, plus

65%

8 %

The promised benefits of **Cloud**

A report from Cloud Security Alliance suggests that **90%** of CIOs have experienced **failed** or disrupted data migration projects – mostly due to the complexity of moving from on-premises environments to the cloud. Only 25% of those asked in the same study met their deadlines for migrations, with the average project taking 12 months.

A 2019 study from Fortinet found that **74%** of companies have **moved applications back** on-premises from the cloud – repatriating them – after failing to achieve the anticipated returns.

How do customers benefit from the cloud?

Agility

Teams can experiment and innovate quickly and frequently

Cost Savings

Only pay for what you use, leveraging economies of scale

Elasticity

Easily scale up or down with the needs of the business

Innovation

Focus on business differentiators, not infrastructure

Global Footprint

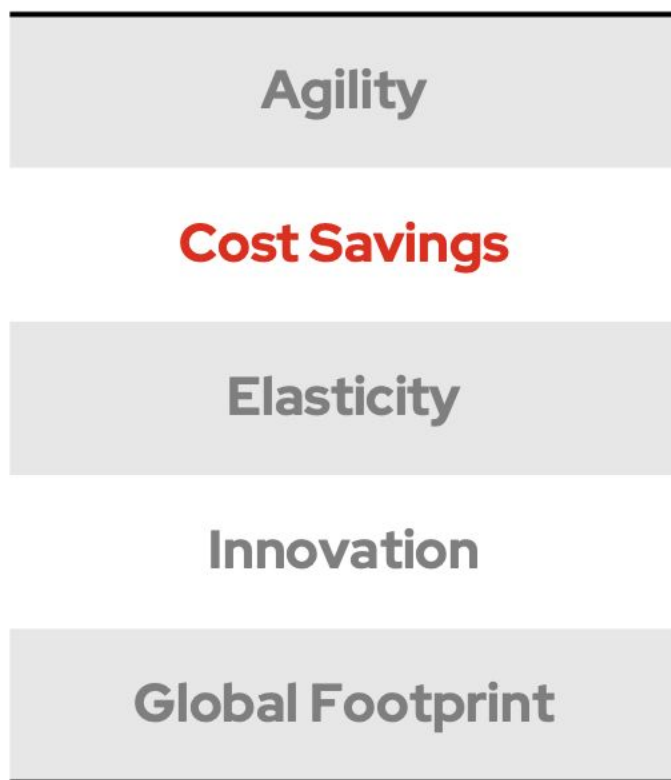

Extensive, reliable, and secure global cloud infrastructure

Pitfalls

- Organisation / Process / Culture
- Outcome versus Output
- Measurable cost reduction vs latent cost exposure

Costs – Or where does cloud business value come from?

Non-TCO drivers constitute over 90% of the business value

Distribution of benefits

- IT infrastructure cost reductions
- Risk mitigation - user productivity
- IT staff productivity
- Business productivity

Summary

- ▶ focus on **innovation** to add value to your business
- ▶ Lower costs by increasing **resource utilization**
- ▶ Reduce **operational** overhead
- ▶ Increase **scaling** capabilities
- ▶ Increase **security** and **compliance**
- ▶ No need to **re-architect** existing applications
- ▶ Helps to **accelerate** your cloud migration journey
