AWS and Red Hat Partnership Helps Customers Meet Digital Needs

Red Hat and AWS are industry leaders with extensive experience in IT infrastructure, hybrid cloud, digital transformation, and open source innovation.

Through collaborative engineering activities, they offer integrated, certified solutions to meet modern, digital business needs.

Consistent, enterprise-grade platforms with advanced security and management features help organizations build IT infrastructure that supports their business efficiently and cost-effectively and adapts on their schedule.

"Given that Red Hat is the world's leading provider of open-source solutions, our enterprise customers have been passionate about seamlessly running Red Hat Enterprise Linux and various other Red Hat solutions on AWS."

Agenda

AWS Cloud Introduction

Red Hat OpenShift Service on AWS (ROSA)

Integrating ROSA with AWS

AWS Cloud Introduction

© 2023, Amazon Web Services, Inc. or its affiliates.

How do customers benefit from the cloud?

Agility	Teams can experiment and innovate quickly and frequently
Cost Savings	Only pay for what you use, leveraging economies of scale
Elasticity	Easily scale up or down with the needs of the business
Innovation	Focus on business differentiators, not infrastructure
Global Footprint	Extensive, reliable, and secure global cloud infrastructure

Global Presence

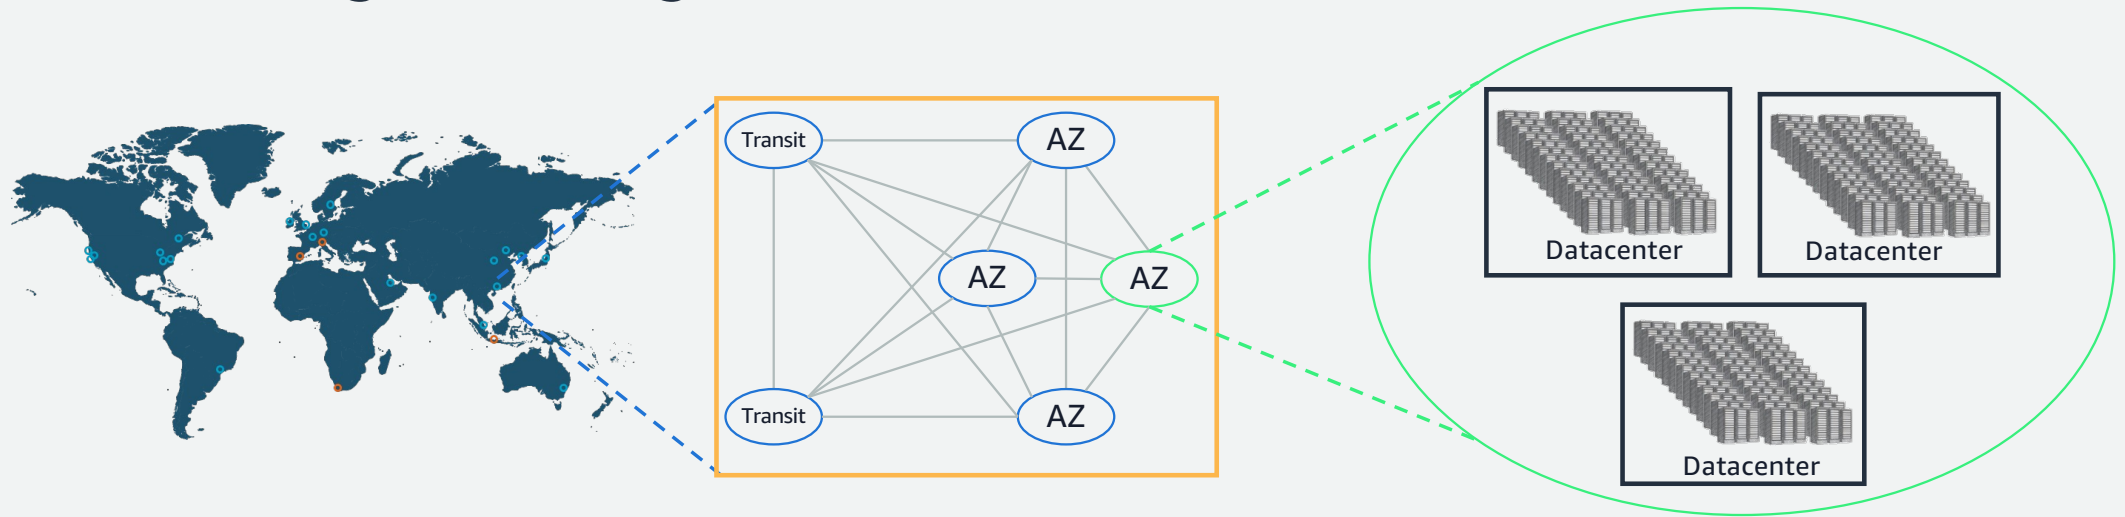

99 Availability Zones
31 Regions

Planned expansion
+5 Regions

● Regions ● Coming soon

AWS Region design

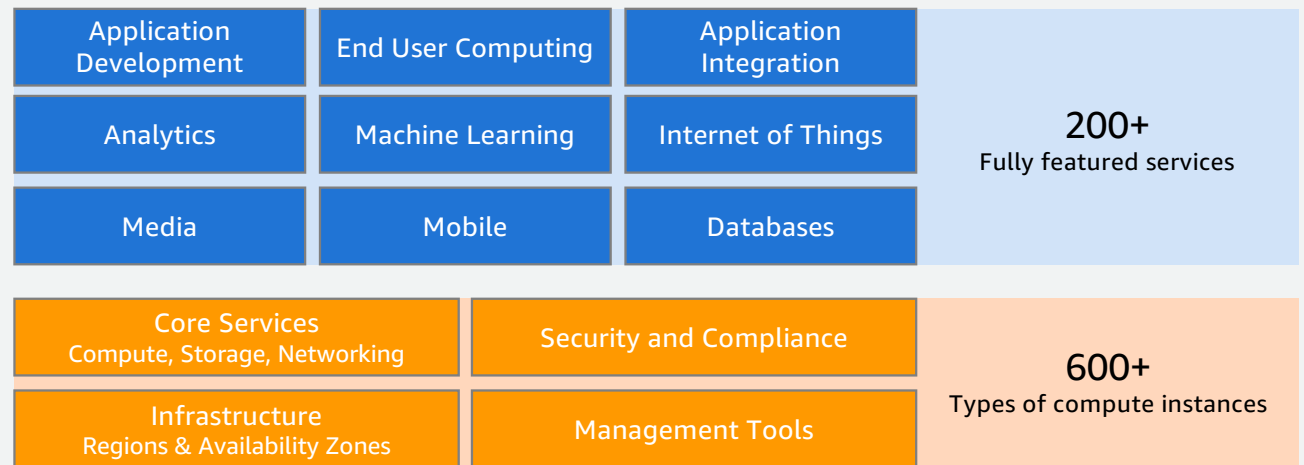

AWS Region

A Region is a physical location around the world where we cluster data centers. We call each group of logical data centers an **Availability Zone**.

AWS Availability Zone (AZ)

Availability Zones consist of one or more discrete data centers, each with redundant power, networking, and connectivity, housed in separate facilities.

Support virtually any workload

Amazon EC2 purchase options

On-Demand

Pay for compute capacity by **the second** with no long-term commitments

Spiky workloads,
to define needs

Reserved Instances

Make a 1 or 3 year commitment and receive a **significant discount** off On-Demand prices

Committed and
steady-state usage

Savings Plans

Same great discounts as Amazon EC2 RIs with **more flexibility**

Committed flexible
access to compute

Spot Instances

Spare Amazon EC2 capacity at **savings of up to 90%** off On-Demand prices

Fault-tolerant, flexible,
stateless workloads

Red Hat OpenShift Service on AWS (ROSA)

What our customers ask for

Build applications,
not infrastructure

Scale quickly
and seamlessly

Security and
isolation by design

Container orchestration: ECS, EKS, and ROSA

ECS

Powerful simplicity

AWS-opinionated way to run containers at scale

Reduce decisions without sacrificing scale or features

Reduce time to build, deploy, and migrate applications

EKS

Open flexibility

AWS-optimized managed upstream Kubernetes with four supported versions

Build your custom platform for compliance and security, with AWS services and community solutions

Accelerate your containerization and modernization with canonical patterns using AWS Blueprints

ROSA

Turn-key Platform

Integrated Kubernetes based application platform with built-in CI/CD, monitoring, and developer tools.

Continue with existing OpenShift skills and processes from on-prem environments to the cloud

Accelerate application migration and modernization by re-hosting, re-platforming, or re-factoring workloads

Red Hat OpenShift Service on AWS differentiation

Ease of use

Create OpenShift clusters from console or CLI in minutes

Reuse existing skills

Unified bill

Leverage your existing AWS commitment to use OpenShift

Get single unified bill from AWS for both OpenShift and AWS consumption

Pay-as-you-Go pricing

24/7 joint support

Integrated support systems

Contact AWS or RedHat for support

Built on AWS and RedHat's decades of enterprise IT knowledge and experience

AWS integrations

Consume AWS services through OpenShift

Platform: build or buy?

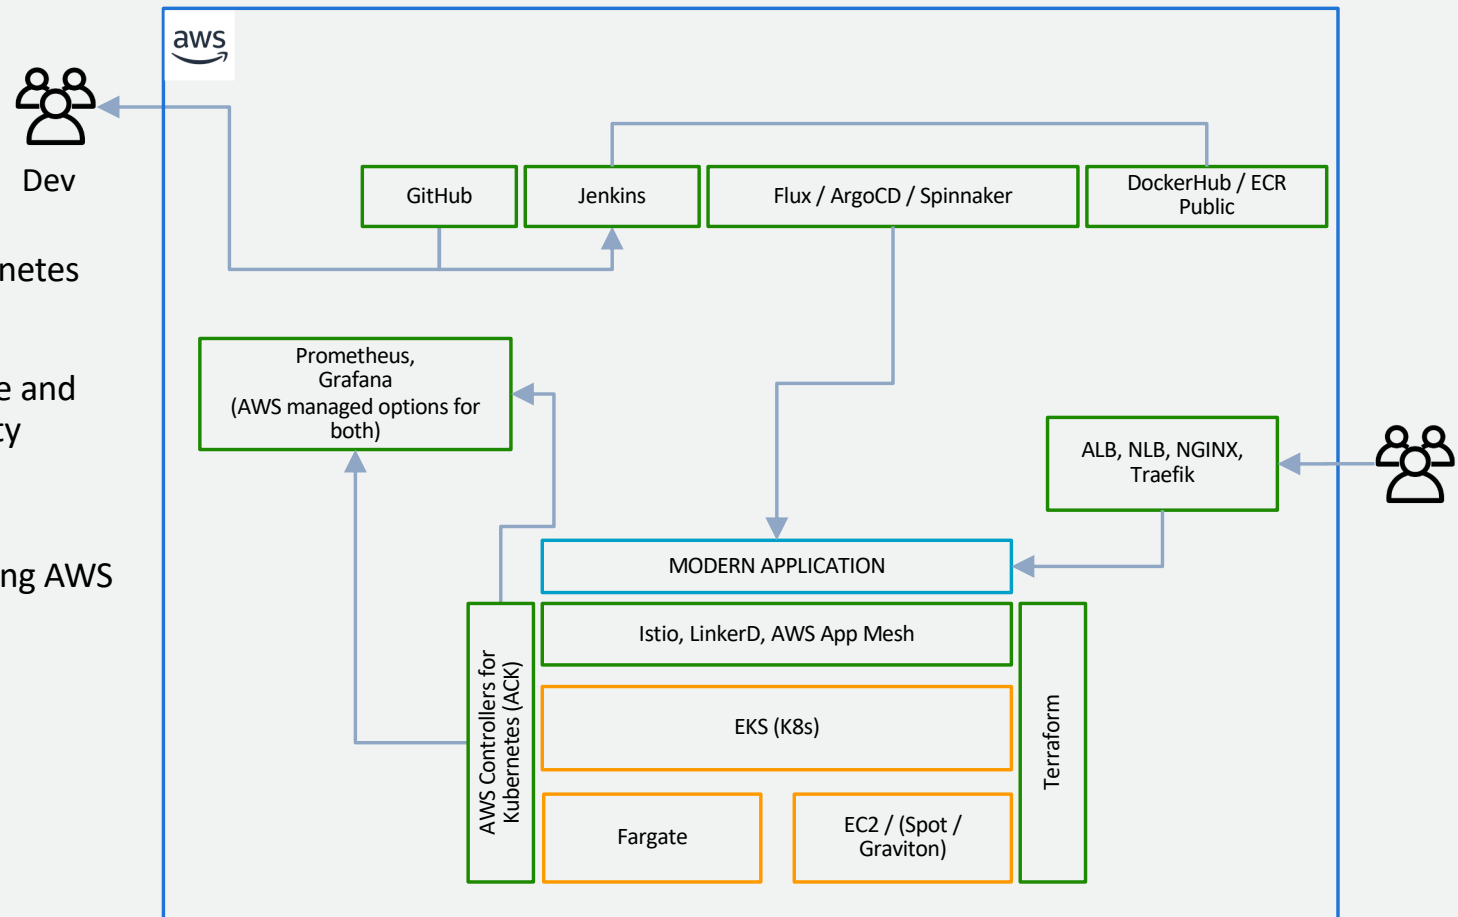

© 2023, Amazon Web Services, Inc. or its affiliates.

Build vs. buy

Amazon EKS

Open source flexibility

- AWS-optimized managed upstream Kubernetes with four supported versions
- Build your custom platform for compliance and security, with AWS services and community solutions
- Accelerate your containerization and modernization with canonical patterns using AWS Blueprints

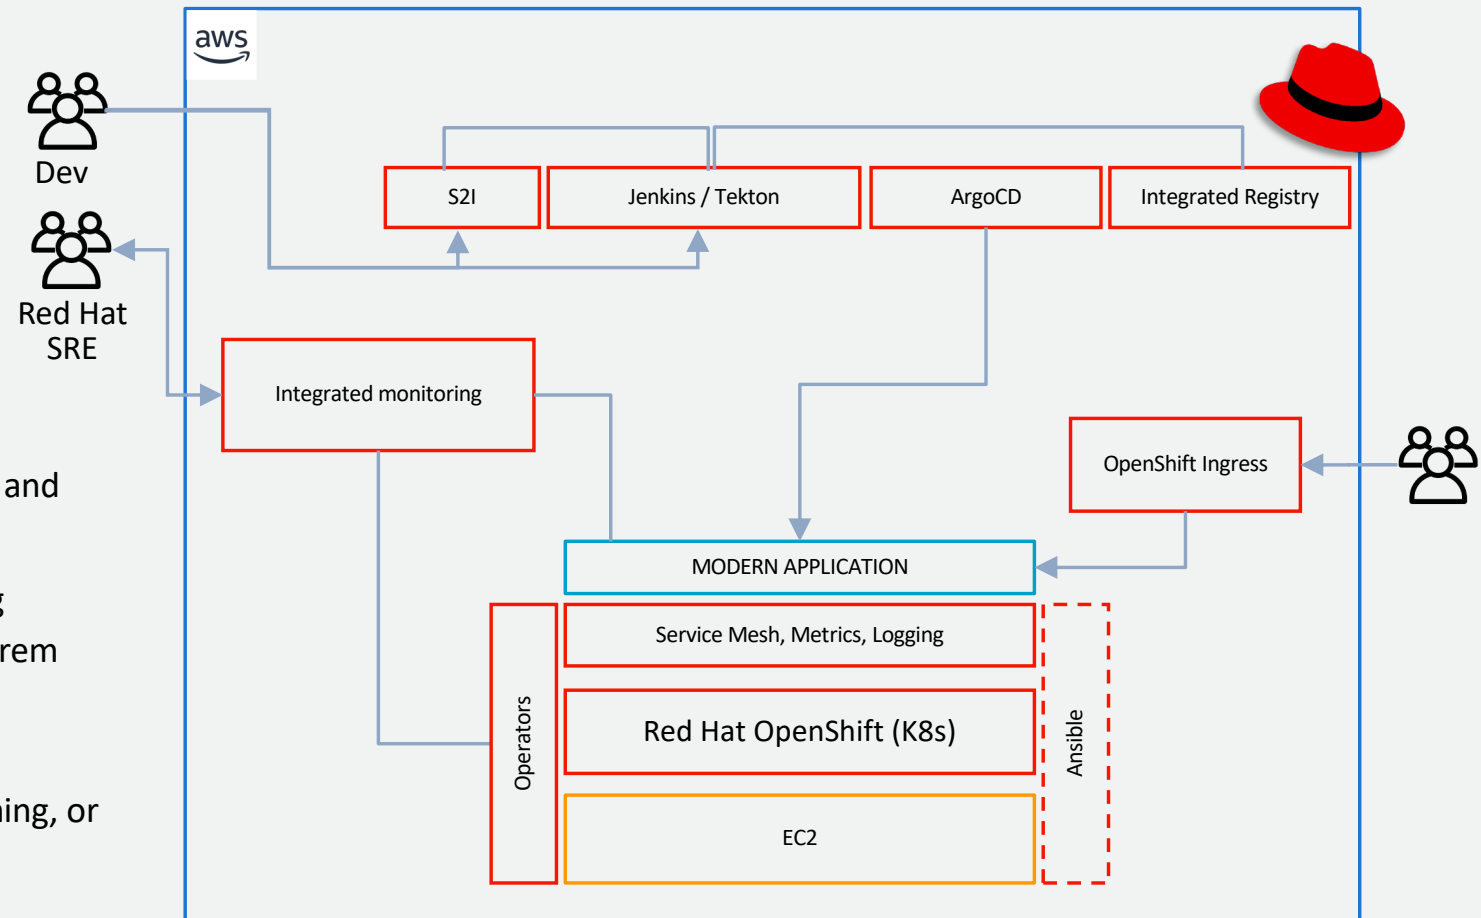

Build vs. buy

Red Hat OpenShift on AWS

Turn-key application platform

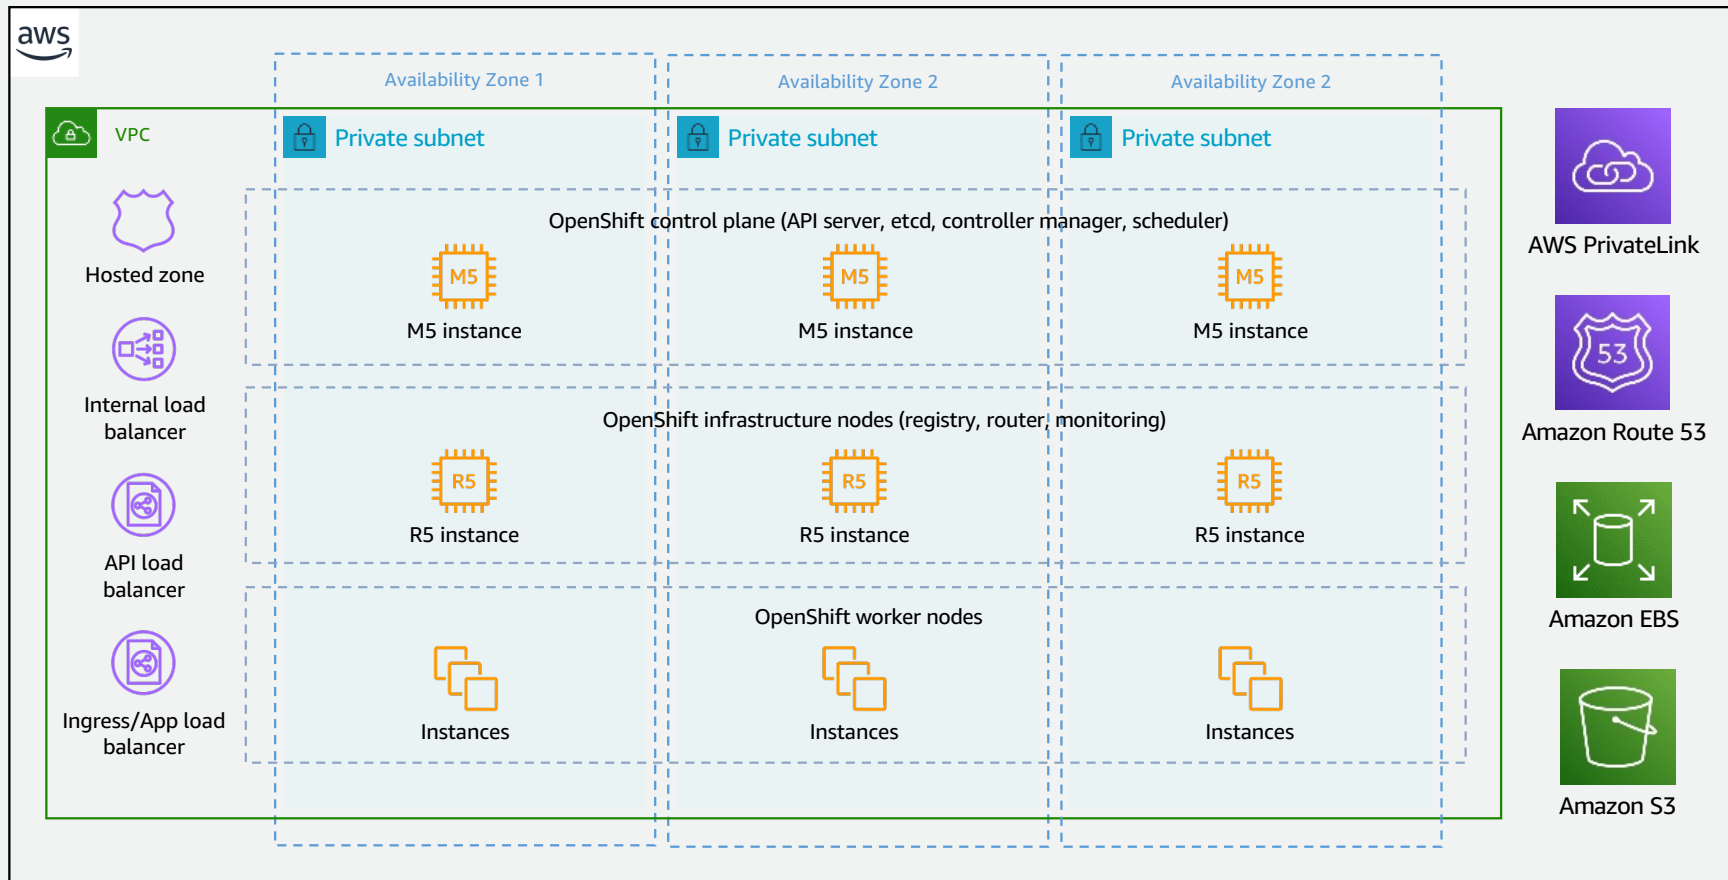

- Integrated Kubernetes based application platform with built-in CI/CD, monitoring, and developer tools.
- Activate ROSA and continue with existing OpenShift skills and processes from on-prem environments to the cloud
- Accelerate application migration and modernization by re-hosting, re-platforming, or re-factoring workloads

ROSA private cluster architecture example

ROSA cluster

ROSA: Batteries included but swappable

OpenShift Service Mesh with Istio to connect, secure, and observe services

OpenShift Serverless with Knative to enable hybrid serverless, FaaS, and event-driven architectures

OpenShift builds with Shipwright to build images from code using S2I + others and integrate with GitHub Actions

OpenShift Pipelines with Tekton to provide Kubernetes-native CI/CD pipelines

OpenShift GitOps with ArgoCD to enable declarative GitOps-based continuous delivery

Application-level observability for developers to build and manage their apps

Log management of infrastructure, application, and audit logs + forwarding capabilities

Cost management visibility, mapping, and modeling across hybrid infrastructure in order to stay on budget

Kubernetes Cluster Services

Install | Over-the-air updates | Networking | Ingress | Storage | Monitoring | Log forwarding | Registry | Authorization | Containers | Operators | Helm

Kubernetes

Linux

Amazon EC2

Benefits of ROSA turnkey application platform

Developers

Fully managed clusters in minutes to build, deploy, and run applications using built-in developer UI that abstracts the complexity of Kubernetes

Collaborate across teams via shared projects

Administrators

Standardized and streamlined operations across on-premises and AWS environments

Built-in monitoring, logging, and networking

Choose platform version upgrade as required for the business

Business leaders

Consolidated billing and cost management across the business

Consumption-based pricing for surge and R&D usage

24/7 full-stack management and support

Financially backed 99.95% SLA

ROSA Cluster Creation

Create clusters with only a few inputs

```
Admin-extended:~/environment $ rosa create cluster --interactive
I: Interactive mode enabled.
Any optional fields can be left empty and a default will be selected.
? Cluster name: my-rosa-cluster
? Deploy cluster using AWS STS: Yes
? OpenShift version: 4.11.5
I: Using arn:aws:iam::402140135972:role/ManagedOpenShift-Installer-Role for the Installer role
I: Using arn:aws:iam::402140135972:role/ManagedOpenShift-Worker-Role for the Worker role
I: Using arn:aws:iam::402140135972:role/ManagedOpenShift-Support-Role for the Support role
I: Using arn:aws:iam::402140135972:role/ManagedOpenShift-ControlPlane-Role for the ControlPlane role
? External ID (optional):
? Operator roles prefix: my-rosa-cluster-a1a8
? Multiple availability zones (optional): Yes
? AWS region: us-east-1
? PrivateLink cluster (optional): No
? Install into an existing VPC (optional): No
? Select availability zones (optional): No
? Enable Customer Managed key (optional): No
? Compute nodes instance type: m5.xlarge
? Enable autoscaling (optional): Yes
? Min replicas: 3
? Max replicas: 3
? Machine CIDR: 10.0.0.0/16
? Service CIDR: [? for help] (172.30.0.0/16)
```

Hi, elindh.
Welcome to your Hybrid Cloud Console.

Red Hat OpenShift Service on AWS

Easily provision your ROSA cluster with AWS Security Token Service in the new web interface with the same secure and capable managed experience provided in the command-line interface.

Try out ROSA today

Get started with Hybrid Cloud Console capabilities

Application and Data Services

Configure, monitor, optimize, and orchestrate applications and data services on demand.

[Explore services](#) →

Red Hat OpenShift

Build, run, scale container-based applications - now with developer tools, CI/CD, and release management.

[Scale your applications](#) →

Red Hat Insights

Proactively assess, secure and stabilize the business-critical applications you scale from your Red Hat platforms.

Manage [RHEL](#) | [Ansible](#) | [OpenShift](#)

Edge Management

Keep your systems protected, available, and operating efficiently. Update all your RHEL for Edge systems with secure, over-the-air updates.

Ansible Automation Platform

Create, share, and manage automations - from development and operations to security and network teams.

Subscription Management

View and manage your Red Hat subscriptions.

Red Hat OpenShift Service on AWS - Summary

- Focus on **innovation** to add value to your business
- Reduce **operational** overhead
- Increase **scaling** capabilities, increase **resource utilization**
- Helps to **accelerate** your cloud migration journey - no need to **re-architect** existing applications
- ROSA & AWS Service Integrations
